

Certifiée ISO 9001 : 2008

HIGH TECHNOLOGY TRANSLATORS

HTT awarded ISO 9001: 2008 certification for multilingual website design and content management

Rouen, France (HTT): HTT, the translation company that supervised and financed the development of the Intranet™ (www.intra.net), the first multilingual portal for professional interpreters and translators, has just had its ISO 9001: 2008 certification renewed by Bureau Veritas International.

No non-compliance of any kind with the company's quality management procedures was found during the audit. In addition, the company's certification has been extended to include "multilingual website design and content management."

Further to the experience gained during the development of the Intranet™, and its associated website Intranews™ (www.intranews.net), now the leading news site for the language industry worldwide, HTT has the skills enabling it to offer a complete website design service based on leading-edge information and communication technologies, in all European, Middle Eastern and Asian languages.

This service includes not only all the design and development of a website including on-lining and hosting, but also the management and translation of the website's multilingual terminology and content.

In addition to the HTT website, a recent example of this expertise can be seen on www.global-genes.com, in which HTT played a proactive role as technical, technological and linguistic consultants, before designing and developing the website with a comprehensive e-commerce solution (including quotation, shopping cart, invoicing, accounting and secure payment systems), and content and terminology management in each language.
